

1. What are the overall average heights and diameters for each tree species you studied? What about the averages per species at each site?

2. Do trees get thicker as they get taller? Plot your data on the graph below. Use different colors or symbols for each species. Remember to label your axes and use appropriate scale!

Title: _____

3. Draw a line of best fit for each species. Do you see any correlation between height and diameter? Are there any data points far away from the others?
